TABLE OF CONTENTS

01 **Abstract**

The title, abstract and description of the project.

02 **ER Diagram**

Currently existing system and how we’re improving it.

03 **Database Plan**

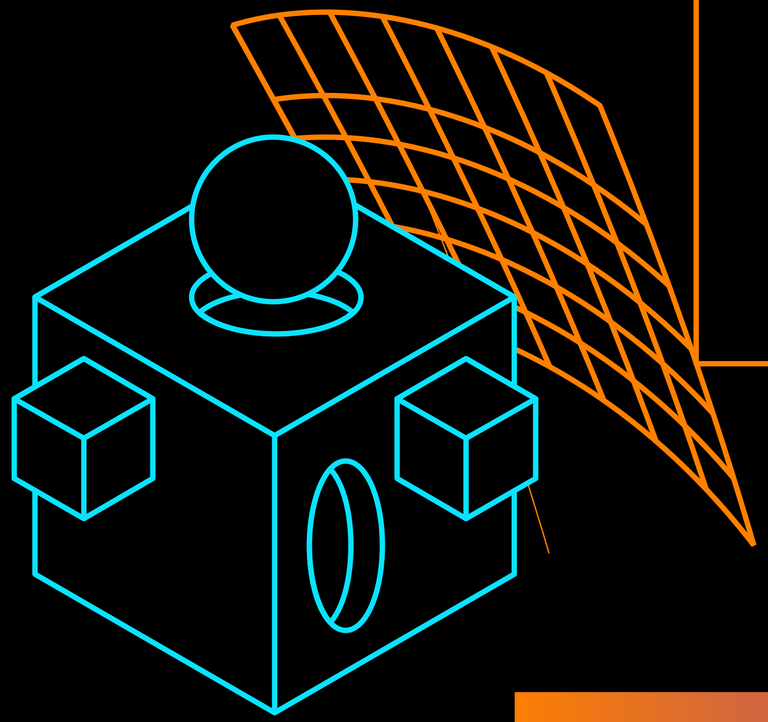
The main muscles & brains of the project.

04 **Tools Used**

Expected results, tentative plans and references.

05 **Expected Results**

Finalè



"TIME IS VALUABLE"
—RICK ASTLEY

01

ABSTRACT & PROBLEM STATEMENT

PROBLEM

Extended delivery periods for getting groceries and fresh items delivered.

SOLUTION

Have a decentralised warehouse-free essential service, with faster deliveries.

HEALTH
AND
DAILY
ESSENTIALS
SERVICES

DRAWBACKS OF THE CURRENT SYSTEM

TIME

The current system takes at least a day to get the products delivered.

AVAILABILITY

The stocks are warehouse limited.

STORAGE COSTS

Storing them in a rented warehouse increases maintenance cost

STORAGE AREA

Waste of space for bulking items.

DOMINANCE

Less competitors for the giant industry. Support locals.

VENDOR REACH

Getting recognition from local vendors.

OUR SOLUTION

FASTER

Lightning fast response time and reduced waiting times.

PROFITABLE

Helpful for the local businesses, gains attraction.

NEW

New idea that isn’t implemented as widely yet.

OPERATIONS

CLIENT

Orders necessary grocery items on the application.

DELIVERY

Finds the nearest delivery executive and fetches them the goods for the client.

LOCATION

Application, searches for the nearest registered grocery shop.

STOCKS

If the ingredients are present in the shop's database, then an order is placed.

THEM

Use a warehouse, slow and far shipping times, takes a day, additional costs for warehouse, separate delivery timing slots, high maintenance cost, high rate of failure in the chain,

US

Orders from the local shops near the user, no warehouse or whatsoever, fixed and low delivery charge since shop is near client, low maintenance cost, low failure rate.

TIME AND COST SAVED

40%

LABOUR

Warehouse maintenance, operations etc.

60%

PACKAGING

Long distance endurance packaging.

80%

TIME

Shipping time, transit times etc.

75%

STORAGE

Warehouse space, renting costs etc.

DATABASE PLAN

DATABASE FRAMEWORK

MYSQL SERVER

USER

Client details, first name, last name etc.

ORDER

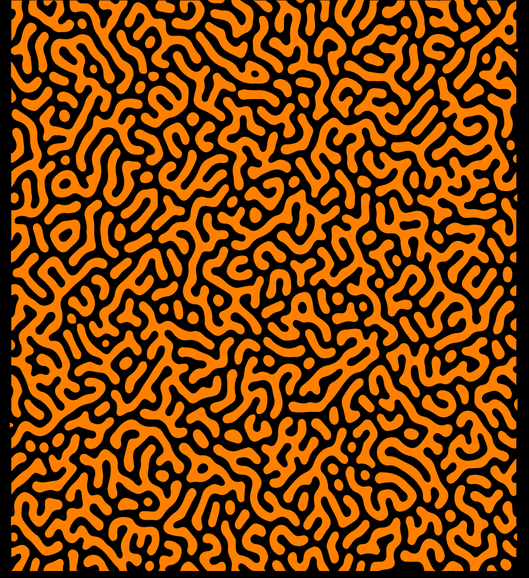
Items required by the client, price.

STOCKS

Check if the ordered items are present or not.

NAME & DISTANCE

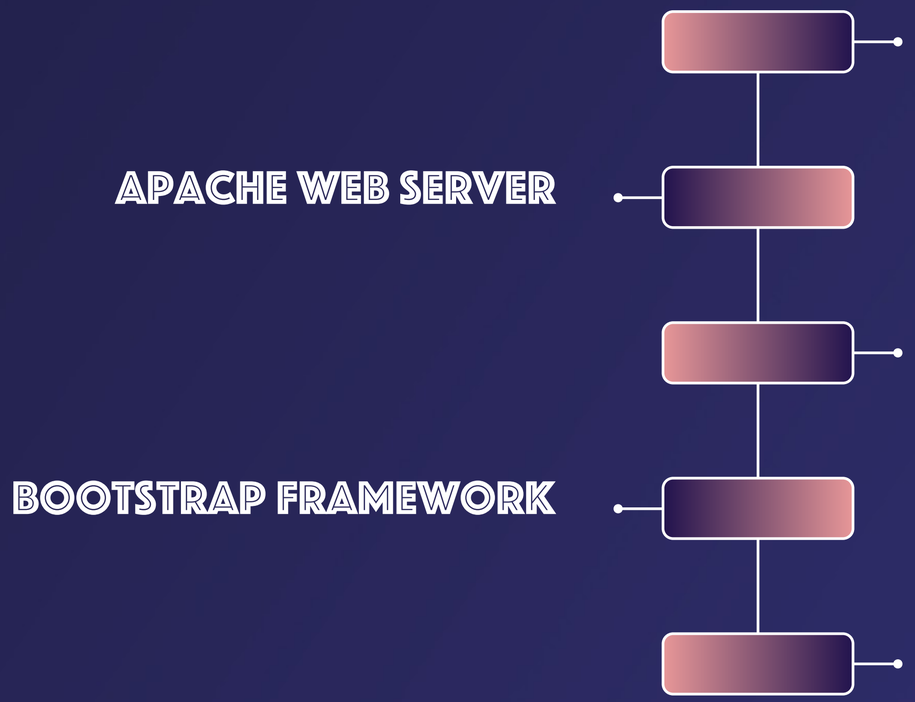
Shop distance, Client distance and names.



05

TOOLS USED

SOFTWARES USED



VISUAL STUDIO CODE

APACHE WEB SERVER

MYSQL WORKBENCH

BOOTSTRAP FRAMEWORK

VARIOUS LANGUAGES

JavaScript, HTML, SASS, PHP, SQL

ACCESSIBILITY

This would be accessible on all mobile devices through a browser.

06

EXPECTED OUTCOME

OUR PROCESS

OCT. 19

Create a basic HTML framework

OCT. 29

Finalise HTML & JS Frameworks

NOV. 5

Initialise PHP & SQL database

NOV. 10

Connect everything together

NOV. 15

Final website.
